

Manual test plan for Cider

Start the frontend and visit <http://localhost:3000/>

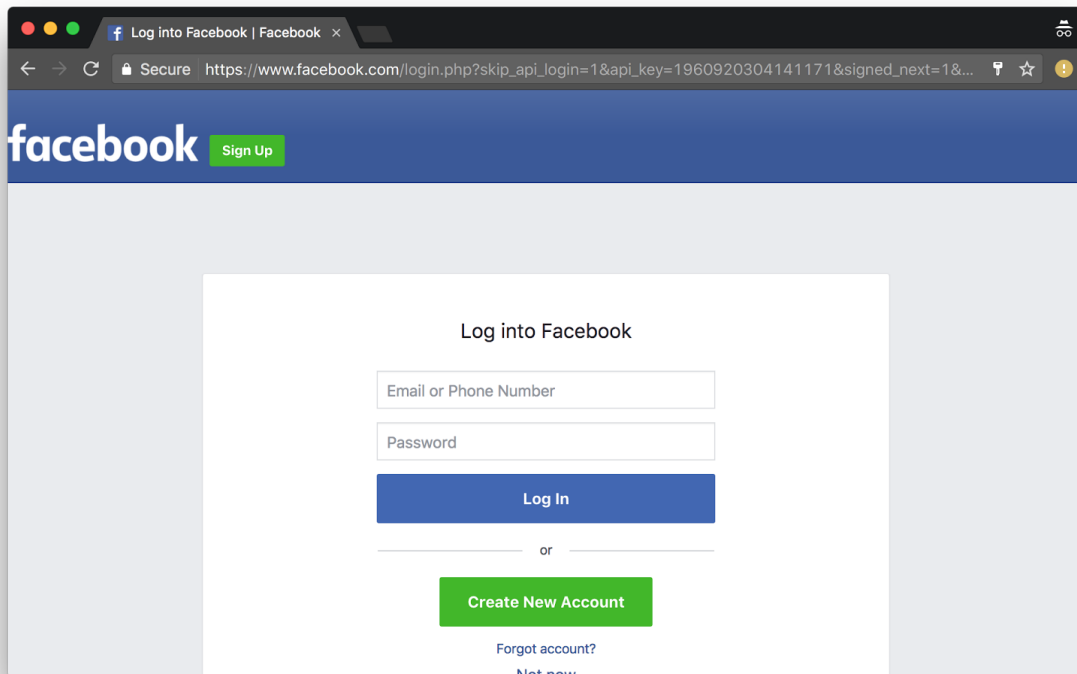

You should see this

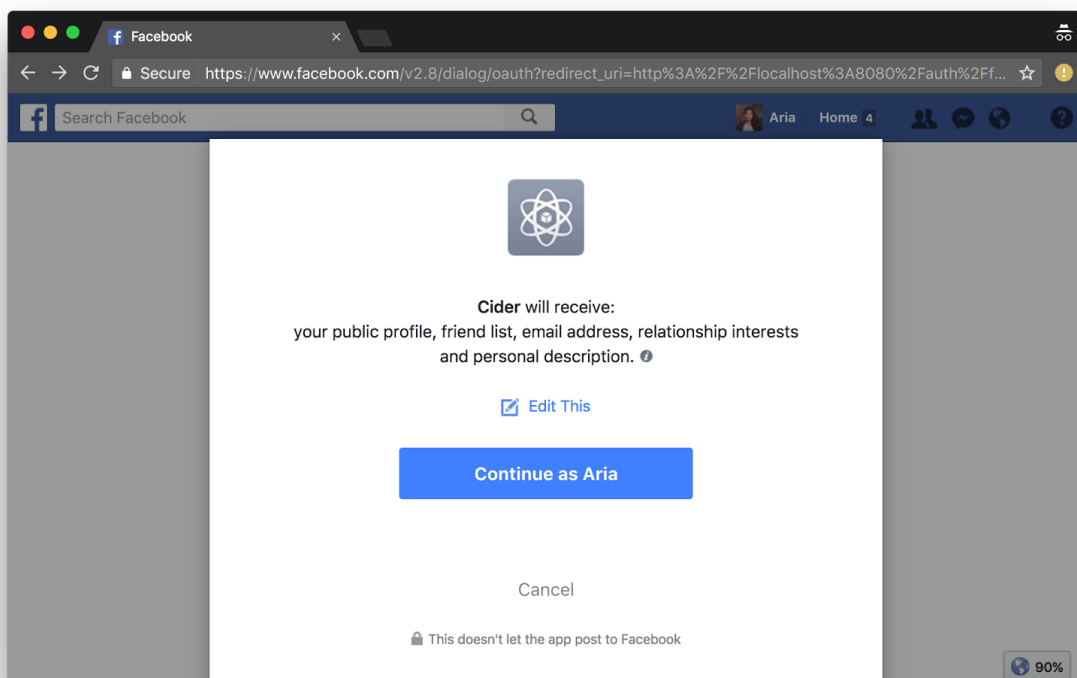

The router should still work from last week, but you won't see any of it at the moment)

There are two buttons on the right, Login and Sign Up. Hit Sign Up if this is your first time here, else hit Login.

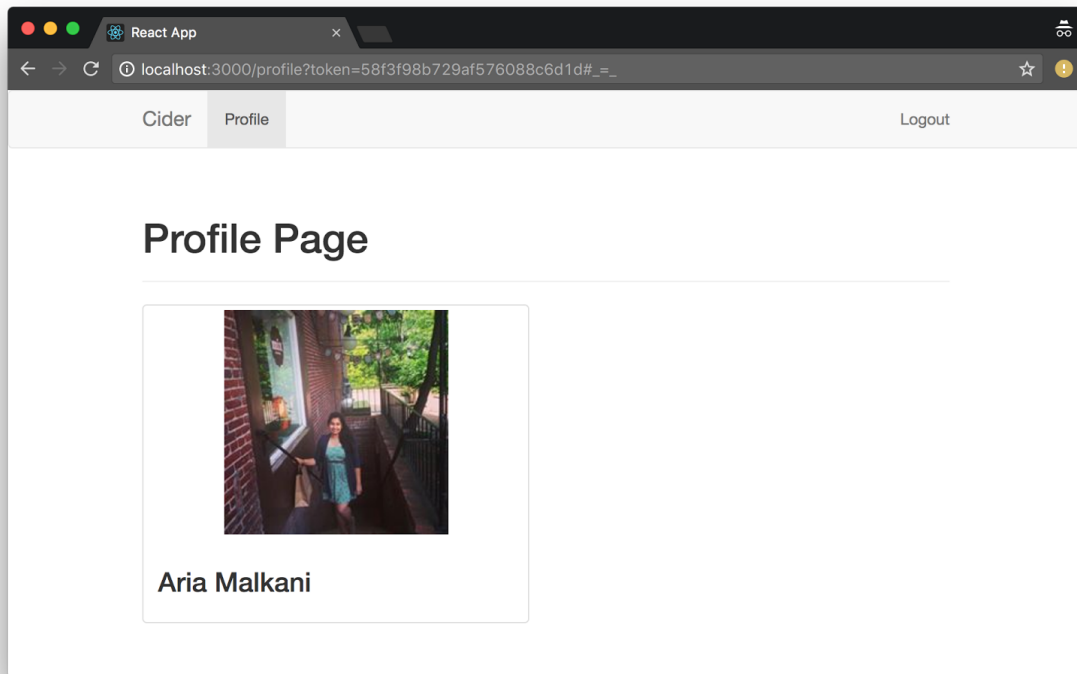

You should see a screen by facebook to login

Enter your credentials and hit 'Log In'

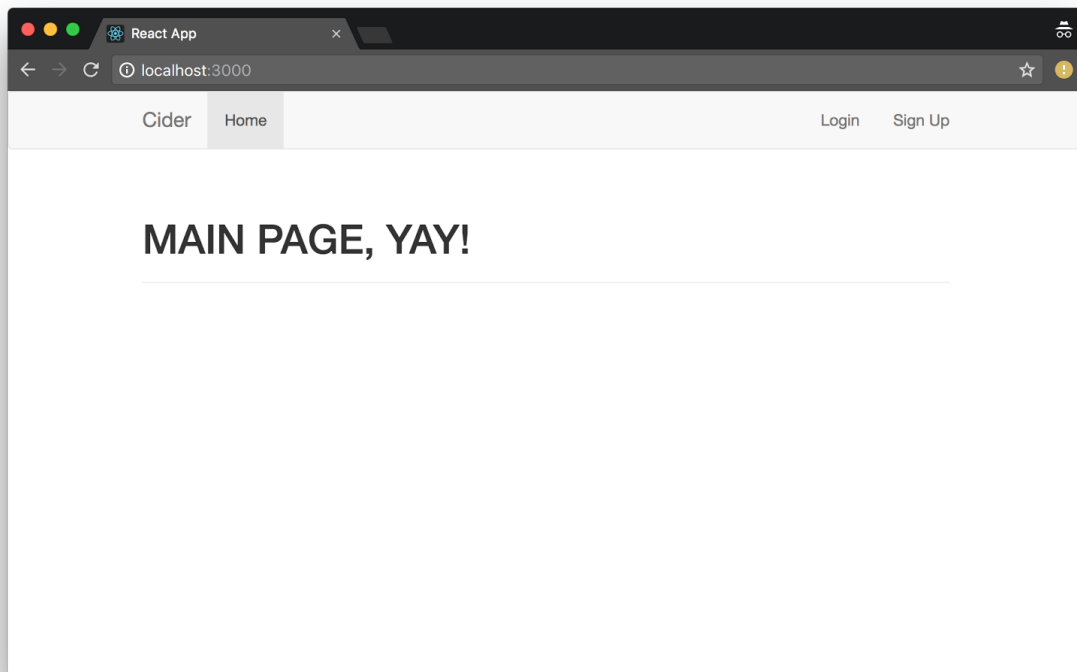

After logging in, you should see a profile page that sorta looks like this (If your facebook has a bio, you'll see that too below your name)

Now, notice that the login link is missing, and so is the Home Page. Try going to '/home', it should instantly redirect you here, to the profile page

Now, try hitting "Logout", and you're back to the home page

Try going to `/profile`. That should instantly redirect you back to the home page since you haven't logged in yet
